ASTRONAUTICS & AERONAUTICS  
SEPTEMBER 1982

STAT

Leslie C. Dirks has been named VP for R&D at Raytheon. The Research Div. will report to him, and he will direct and coordinate research and technology programs of the company's 11 divisions and eight subsidiaries. Dirks had been the CIA's deputy director for science and technology and in 1979 had received from President Carter the National Security Medal for his "outstanding contribution in creating and directing a major technical intelligence program of great national importance." He received physics degrees from MIT and Oxford Univ.
